EDUCATION

McMaster University

Software Engineering with Co-op (B.Eng)

Hamilton, Ontario

Expected Graduation: April 2027

- **Specialization GPA: 3.7** — Dean's Honors List 2023, 2024, 2025
- **Relevant Coursework:** Machine Learning, Networks and Security, Data Structures & Algorithms, Software Architecture, Operating Systems, Software Testing, Probability and Statistics

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, SQL, C, C++

Frameworks/Libraries: React, Next.js, FastAPI, Flask, Spring Boot, Node.js, TensorFlow, Keras

Databases/Cloud: PostgreSQL, MongoDB, MySQL, AWS

Tools: Docker, Git, Linux, pytest, Playwright, Selenium, GitHub Actions

EXPERIENCE

Software Developer Intern – Quantitative Technology Services

Halifax, Nova Scotia

RBC Capital Markets – Equity Derivatives

May 2026 - August 2026

- Cut position-break investigation time **92%**, from **120 to 10 minutes**, by building a **Python** tool that cross-references an **8M-line server log**, Oracle data, and reconciliation files
- Built and deployed a production-support platform using **React, Flask, and PostgreSQL** with enterprise **LDAP/NTLM authentication**, centralizing Jira, Confluence, Webex, and internal tooling for **6+ trading and risk applications**
- Automated **10+ hours of weekly reporting** with a **Python ETL pipeline** using REST APIs, producing incident and vulnerability reports used across **2 teams** and presented to **100+ stakeholders**
- Built an **AI analytics assistant** using REST APIs and an internal **LLM API** to answer incident and vulnerability questions and generate charts, saving **3 hours weekly**

Software Engineer Intern

Toronto, Ontario

TFI International

April 2025 - April 2026

- Automated load bidding systems by developing multiple Python bots, saving Operation Coordinators **10 hours weekly** and cutting costs by an estimated **\$25,000 annually**
- Developed an **ETL pipeline** for a company-wide OCR platform in a 3-person team, leveraging **Python, Azure AI, and NoSQL**. The system automates invoice processing for **30+ daily users**, reducing manual data entry time by an estimated **90%** and minimizing human error
- Owned the OCR's core data system in MongoDB, improving **query performance by over 95%**: designed a flexible **NoSQL schema** and wrote robust **Python functions** to efficiently save and update all OCR results
- Developed an internal web application integrated with **RESTful APIs** from two core company systems, automating data synchronization and saving **over 8 hours of manual work weekly**

PROJECTS

Riverwise 🍷 | *TypeScript, Next.js, Python, FastAPI, PostgreSQL, Docker*

- Built and deployed a full-stack river-conditions platform ingesting Water Survey of Canada and Open-Meteo data hourly across 6 Nova Scotia gauges, serving requests from **PostgreSQL** to isolate users from provider failures
- Engineered an **idempotent ingestion pipeline** with retries, revision-aware upserts, and versioned scoring, validated by **68 backend tests**, **5 Playwright E2E tests**, and GitHub Actions CI

AI Fitness Coach 🍷 | *React, TypeScript, MediaPipe, FastAPI, SQLAlchemy, PostgreSQL* | **DeltaHacks XI**

- Developed a browser-based fitness coach in a **4-person team**, using MediaPipe to achieve **98% rep-counting accuracy** and provide real-time form feedback across **4 exercises**
- Processed **33 pose landmarks** in a Web Worker for responsive, on-device inference; built a FastAPI workout-history backend and **18 automated tests**
